

## FOR IMMEDIATE RELEASE

### FP Developments Announces Alliance with Packserv Australia

*FP Developments' expands their automation offerings with Packserv's liquid fill and finish technologies.*

**Williamstown, New Jersey** — FP Developments announced they are partnering with Packserv Australia, a manufacturer of liquid filling, capping, and packaging equipment specializing in the FMGC space. FP Developments will represent and support Packserv in the U.S. market, integrating them into FP's broader automation solutions portfolio.

This allows FP Developments to expand its capabilities with Packserv's filling and capping technologies while providing customers with FP's U.S.-based engineering, integration, service, and long-term support. Together, the companies will offer production-ready solutions designed to support a range of liquid products and packaging formats.

“Packserv’s modular design equipment aligns well with the type of systems our customers are looking for; proven, flexible, and ready to be integrated into real production environments,” said Jeff Denson, Head of Sales and Operations at FP Developments. “This collaboration allows us to bring these technologies to the U.S. market while continuing to provide the engineering support and long-term service our customers expect from FP.”

“As an industry-leading packaging machinery designer and manufacturer in Australia, Packserv recognizes that FP Developments is a strong strategic fit for us and the perfect company to align with as we expand into the US. Their machine quality, depth of industry experience, and proven reliability align closely with our own standards,” says Nathan Wardell, Managing Director and owner of the family-run business with 30 years of industry experience. “By expanding the FPD range and complementing it with solid technical support, we can deliver greater value to FMCG manufacturers globally.”

FP Developments and Packserv Australia will appear together at **PackExpo East** booth #1116 in Philadelphia, February 17-19, showcasing the new range where attendees can learn more about the alliance and how the combined offering supports scalable, flexible automation for clients.

This collaboration reflects FP Developments' continued focus on delivering reliable, engineered automation systems that meet customer performance requirements while supporting future growth and operational flexibility.
